# MariaDB Enterprise Cluster

Building highly available, enterprise-grade applications has never been easier

MariaDB Enterprise Cluster is an easily deployed HA solution that gives you true competitive advantages, by helping your enterprise to achieve service level objectives for high availability in the most cost-effective manner.

With MariaDB Enterprise Cluster, your application is always online, 24x365. Whether you are upgrading your database, system software or hardware – or recovering from a disaster – you can count on zero app downtime with MariaDB Enterprise Cluster.

It's easy to scale your database layer with MariaDB Enterprise Cluster. With just a few clicks, no downtime, and no changes to your app, you can grow your cluster to dozens of nodes either on-premise or in the Cloud whilst keeping your workload evenly distributed. This results in cost effective solutions that reduce business risk and achieve unique levels of data protection, availability, performance and return on investment.

Purchase MariaDB Enterprise Cluster to choose the appropriate level of HA to efficiently support your business objectives today and in the future.
